Following a pre-defined trading system might be a solid choice for securing profits in the stock market. Defining goals before creating a plan can be a good way to start the trader off on the right path. There are bound to be many ups and downs throughout the trading process. Being able to manage wins and losses may be one of the most important factors to becoming a successful trader. Without a researched plan, traders may realize how quick the losses can pile up. Properly managing risk, position size, entry and exit points, and stops, may come with experience, but it is typically necessary in order to stay above water in the fast paced market environment.

Tianyun International Holdings Ltd (6836.HK) currently has a 14 day Williams %R of -58.33. In general, if the level goes above -20, the stock may be considered to be overbought. Alternately, if the indicator goes under -80, this may signal that the stock is oversold. The Williams Percent Range or Williams %R is a technical indicator that was developed to measure overbought and oversold market conditions. The Williams %R indicator helps show the relative situation of the current price close to the period being observed.

We can also take a look at the Average Directional Index or ADX of Tianyun International Holdings Ltd (6836.HK). The ADX is used to measure trend strength. ADX calculations are made based on the moving average price range expansion over a specified amount of time. ADX is charted as a line with values ranging from 0 to 100. The indicator is non-directional meaning that it gauges trend strength whether the stock price is trending higher or lower. The 14-day ADX presently sits at 9.87. In general, and ADX value from 0-25 would represent an absent or weak trend. A value of 25-50 would indicate a strong trend. A value of 50-75 would indicate a very strong trend, and a value of 75-100 would signify an extremely strong trend. At the time of writing, Tianyun International Holdings Ltd (6836.HK) has a 14-day Commodity Channel Index (CCI) of -23.10. Developed by Donald Lambert, the CCI is a versatile tool that may be used to help spot an emerging trend or provide warning of extreme conditions. CCI generally measures the current price relative to the average price level over a specific time period. CCI is relatively high when prices are much higher than average, and relatively low when prices are much lower than the average.

A commonly used tool among technical stock analysts is the moving average. Moving averages are considered to be lagging indicators that simply take the average price of a stock over a certain period of time. Moving averages can be very helpful for identifying peaks and troughs. They may also be used to assist the trader figure out proper support and resistance levels for the stock. Currently, the 200-day MA for Tianyun International Holdings Ltd (6836.HK) is sitting at 1.21. The Relative Strength Index (RSI) is a momentum oscillator that measures the speed and change of stock price movements. The RSI was developed by J. Welles Wilder, and it oscillates between 0 and 100. Generally, the RSI is considered to be oversold when it falls below 30 and overbought when it heads above 70. RSI can be used to detect general

trends as well as finding divergences and failure swings. The 14-day RSI is presently standing at 46.65, the 7-day is 43.29, and the 3-day is resting at 34.96.
