

Needle Action Activity Spotted in Tianyun International Holdings Ltd (6836.HK) 【 GCR 】

2018-03-22 | GCR | 網絡新聞 | [查看原始內容](#)

Shares of Tianyun International Holdings Ltd (6836.HK) are moving on volatility today 0.79% or 0.010 from the open. The HKSE listed company saw a recent bid of 1.28 and 1360000 shares have traded hands in the session.

Successful traders are typically skilled at building highly disciplined trading systems. These systems that they create may range from very simple to highly complex. Traders may need to fine tune the system to suit their specific needs and goals. Finding a little edge can lead to big rewards when dealing with the stock market. It is important to remember that a trading system that works for one person may not work for another. Novice traders may realize how hard it is to actually bring home healthy returns. Acquiring the necessary knowledge may take a long time, but putting in the effort and doing all the homework may help give the trader an advantage over the long run. Many successful stock market traders will be the first ones to admit that finding success is not going to happen overnight. Staying disciplined and being able to learn from mistakes can also go a long way when dealing with the ever-changing equity market landscape.

Pinnacle Investment Management Group Ltd (PNI.AX) has a 14-day ATR of 0.12. The Average True Range is an investor tool used to measure stock volatility. The ATR is not used to figure out price direction, just to measure volatility. The ATR is an indicator developed by J. Welles Wilder. Wilder has developed multiple indicators that are still quite popular in today's investing landscape. The general interpretation of the ATR is the higher the ATR value, the higher the volatility.

Scanning the equity markets, it is quite obvious that there are plenty of stocks to choose from. This may make things a bit overwhelming for the beginner investor, but it should also be seen as a great opportunity. Of course, studying up on every single stock may be nearly impossible. Just focusing in on a few different stocks at a time that pique the interest may be the way to start. Investors are often bombarded with stock picking strategies and sure bet winners. Some of the information might end up being correct, but a lot of it may turn out to be nonsense. If investors decide to manage their own money, they may want to make sure that no stone is left unturned. Doing the proper amount of research can work wonders for the health of a portfolio over the course of time. Following a proven market guru may work for some, but it may leave others with many questions that have gone unanswered. What works for one investor may not work for another.

Currently, the 14-day ADX for Pinnacle Investment Management Group Ltd (PNI.AX) is sitting at 16.85. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.

The RSI, or Relative Strength Index, is a widely used technical momentum indicator that compares price movement over time. The RSI was created by J. Welles Wilder who was striving to measure whether or not a stock was overbought or oversold. The RSI may be useful for spotting abnormal price activity and volatility. The RSI oscillates on a scale from 0 to 100. The normal reading of a stock will fall in the range of 30 to 70. A reading over 70 would indicate

that the stock is overbought, and possibly overvalued. A reading under 30 may indicate that the stock is oversold, and possibly undervalued. After a recent check, the 14-day RSI for Pinnacle Investment Management Group Ltd (PNI.AX) is currently at 41.16, the 7-day stands at 29.32, and the 3-day is sitting at 15.43.

Looking further at additional technical indicators we can see that the 14-day Commodity Channel Index (CCI) for Pinnacle Investment Management Group Ltd (PNI.AX) is sitting at -106.22. CCI is an indicator used in technical analysis that was designed by Donald Lambert. Although it was originally intended for commodity traders to help identify the start and finish of market trends, it is frequently used to analyze stocks as well. A CCI reading closer to +100 may indicate more buying (possibly overbought) and a reading closer to -100 may indicate more selling (possibly oversold).

Moving averages can help spot trends and price reversals. They may also be used to help find support or resistance levels. Moving averages are considered to be lagging indicators meaning that they confirm trends. A certain stock may be considered to be on an uptrend if trading above a moving average and the average is sloping upward. On the other side, a stock may be considered to be in a downtrend if trading below the moving average and sloping downward. Shares of Pinnacle Investment Management Group Ltd (PNI.AX) have a 7-day moving average of 4.31. Taking a glance at the relative strength indicator, we note that the 14-day RSI is currently at 41.16, the 7-day stands at 29.32, and the 3-day is sitting at 15.43.

The stock market can be influenced by many different factors such as news, politics, earnings reports, or even company rumors. Often times the market may not react as expected to certain events. This may cause the investor to become frustrated at times. Sometimes certain market moves may seem to go against prevailing logic. This is why it can be extremely hard to predict near-term moves with any certainty. Taking a big picture look at the financial markets may help offer a clearer picture of how all the different aspects contribute to market movements. Figuring out why a certain move happened may help shed some light when the same scenario arises again in the future.

CHENMING PAPER (1812.HK) Moving -2.49% in Session 【Wall Street Herald】

2018-03-22 | Wall Street Herald | 網絡新聞 | [查看原始內容](#)

Needle moving action has been spotted in CHENMING PAPER (1812.HK) as shares are moving today on volatility -2.49% or -0.34 from the open. The HKSE listed company saw a recent bid of 13.30 and 2327500 shares have traded hands in the session.

Dedicated investors often strive hard to set themselves up for success. Finding long-lasting success in the stock market may not be an easy endeavor. The mindset of a short-term trader may differ greatly from that of a long-term investor. Investors often have to be prepared for many different situations. Obtaining the proper knowledge about stocks and the investing world is typically a main goal for active traders and investors. Once the investor is armed with knowledge, they may be able to see things that others cannot. This may involve staying up to date on various fundamentals, technicals, and macro-economic conditions.

Tianyun International Holdings Ltd (6836.HK) has a 14-day ATR of 0.04. The Average True Range is an investor tool used to measure stock volatility. The ATR is not used to figure out price direction, just to measure volatility. The ATR is an indicator developed by J. Welles Wilder. Wilder has developed multiple indicators that are still quite popular in today's investing landscape. The general interpretation of the ATR is the higher the ATR value, the higher the volatility.

Currently, the 14-day ADX for Tianyun International Holdings Ltd (6836.HK) is sitting at 8.14. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.

Taking a glance at the relative strength indicator, we note that the 14-day RSI is currently at 45.00, the 7-day stands at 42.43, and the 3-day is sitting at 53.70.

New investors may be looking at the soaring stock market and wondering if now is a good time to try and get in on the action. Leaping into the market without proper research or a solid plan may leave the investor on the short end of the stick. Creating a stock investing plan can be as simple or complex as the individual chooses. Sometimes, keeping things simple may be the best way to go. Other times, there may be more than meets the eye, and a deep-dive into the crucial data may be required. New investors may be extremely excited to start buying stocks. They may have heard some great water cooler talk about the next big stock. There is always a possibility that the hot stock chatter may end up coming to fruition, but it could just as likely turn out to be terribly erroneous. Many individuals in the financial world will be quick to provide these can't lose picks, but until this information is thoroughly researched, investors may want to proceed with caution.

Focusing the Lens in on Duluxgroup Limited (DLX.AX) Shares [GCR]

2018-03-22 | GCR | 網絡新聞 | [查看原始內容](#)

Shares of Duluxgroup Limited (DLX.AX) is moving on volatility today 0.13% or 0.010 from the open. The ASX listed company saw a recent bid of 7.66 on 227731 volume.

As we move deeper into earnings season, investors and analysts will be closely watching which companies look they are getting things right. Many investors will be following which companies beat or miss the estimates by a wide margin. Large surprise factors can cause a stock to jump or fall shortly after the actual numbers are released. Investors may also be tracking which industry leaders come out on top during the latest round of earnings reports. Tracking the sectors that are poised for growth may help give the investor a good idea for the types of stocks they may want to add to the portfolio as we get closer to the end of the current calendar year.

Taking a deeper look into the technical levels of Tianyun International Holdings Ltd (6836.HK), we can see that the Williams Percent Range or 14 day Williams %R currently sits at -33.33. The Williams %R oscillates in a range from 0 to -100. A reading between 0 and -20 would point to an overbought situation. A reading from -80 to -100 would signal an oversold situation. The Williams %R was developed by Larry Williams. This is a momentum indicator that is the inverse of the Fast Stochastic Oscillator.

Tianyun International Holdings Ltd (6836.HK) currently has a 14-day Commodity Channel Index (CCI) of -38.38. Active investors may choose to use this technical indicator as a stock evaluation tool. Used as a coincident indicator, the CCI reading above +100 would reflect strong price action which may signal an uptrend. On the flip side, a reading below -100 may signal a downtrend reflecting weak price action. Using the CCI as a leading indicator, technical analysts may use a +100 reading as an overbought signal and a -100 reading as an oversold indicator, suggesting a trend reversal.

The RSI, or Relative Strength Index, is a widely used technical momentum indicator that compares price movement over time. The RSI was created by J. Welles Wilder who was striving to measure whether or not a stock was overbought or oversold. The RSI may be useful for spotting abnormal price activity and volatility. The RSI oscillates on a scale from 0 to 100. The normal reading of a stock will fall in the range of 30 to 70. A reading over 70 would indicate that the stock is overbought, and possibly overvalued. A reading under 30 may indicate that the stock is oversold, and possibly undervalued. After a recent check, Tianyun International Holdings Ltd's 14-day RSI is currently at 48.57, the 7-day stands at 52.50, and the 3-day is sitting at 73.63.

For further review, we can take a look at another popular technical indicator. In terms of moving averages, the 200-day is currently at 1.22, the 50-day is 1.29, and the 7-day is resting at 1.27. Moving averages are a popular trading tool among investors. Moving averages can be used to help filter out the day to day noise created by other factors. MA's may be used to identify uptrends or downtrends, and they can be a prominent indicator for detecting a shift in momentum for a particular stock. Many traders will use moving averages for different periods of time in conjunction with other indicators to help gauge future stock price action.

Currently, the 14-day ADX for Tianyun International Holdings Ltd (6836.HK) is sitting at 8.14. Generally speaking, an ADX value from 0-25 would indicate an absent or weak trend. A value of 25-50 would support a strong trend. A value of 50-75 would identify a very strong trend, and a value of 75-100 would lead to an extremely strong trend. ADX is used to gauge trend strength but not trend direction. Traders often add the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to identify the direction of a trend.

Many investors enter the stock market without a plan in place. Investment goals may be a highly important part of coming out on top. Investors may need to set realistic and measureable goals in order to build a baseline for success. Defining investment goals clearly can help keep individual investors from making common mistakes and losing their shirts. Creating a plan for entering the equity market may start by setting up goals and outlining the objectives of the individual. These goals can differ depending on the person and situation. Many investors will opt to follow strategies put in place by others. This may work fine for some, but not as well for others. Keeping a close eye on particular stocks in the portfolio may help the investor when the time comes to adjust the holdings. Being able to adapt to rapidly changing market environments may turn out to be immensely important when the winds of uncertainty blow in.
