Shares of Tianyun International Holdings Ltd (6836.HK) have seen the needle move 0.72% or 0.010 in the most recent session. The HKSE listed company saw a recent bid of \$1.39 on 4326000 volume.

Investors are usually trying to figure out the best strategy to use when tackling the equity market. Because there is no one perfect method for picking winning stocks, investors may have to try various techniques before they get it right. There are many different factors that can affect the financial health of a company, and this makes it hard to concoct a formula that works well across the board. Studying all the data can help with investing decisions, but it is typically more important to be focusing on the right information. Knowing exactly what data should be studied may only come by logging many hours of research.

Tianyun International Holdings Ltd (6836.HK) currently has a 14-day Commodity Channel Index (CCI) of 11.28. Active investors may choose to use this technical indicator as a stock evaluation tool. Used as a coincident indicator, the CCI reading above +100 would reflect strong price action which may signal an uptrend. On the flip side, a reading below -100 may signal a downtrend reflecting weak price action. Using the CCI as a leading indicator, technical analysts may use a +100 reading as an overbought signal and a -100 reading as an oversold indicator, suggesting a trend reversal.

Digging deeping into the Tianyun International Holdings Ltd (6836.HK) 's technical indicators, we note that the Williams Percent Range or 14 day Williams %R currently sits at -42.11. The Williams %R oscillates in a range from 0 to -100. A reading between 0 and -20 would point to an overbought situation. A reading from -80 to -100 would signal an oversold situation. The Williams %R was developed by Larry Williams. This is a momentum indicator that is the inverse of the Fast Stochastic Oscillator.

The RSI, or Relative Strength Index, is a widely used technical momentum indicator that compares price movement over time. The RSI was created by J. Welles Wilder who was striving to measure whether or not a stock was overbought or oversold. The RSI may be useful for spotting abnormal price activity and volatility. The RSI oscillates on a scale from 0 to 100. The normal reading of a stock will fall in the range of 30 to 70. A reading over 70 would indicate that the stock is overbought, and possibly overvalued. A reading under 30 may indicate that the stock is oversold, and possibly undervalued. After a recent check, the 14-day RSI for Tianyun International Holdings Ltd is currently at 53.41, the 7-day stands at 52.60, and the 3-day is sitting at 62.54.

Another technical indicator that may be a powerful resource for determining trend strength is the Average Directional Index or ADX. The ADX was introduced by J. Welles Wilder in the late 1970's and it has stood the test of time. The ADX is typically used in conjunction with the Plus Directional Indicator (+DI) and Minus Directional Indicator (-DI) to help spot trend direction as well as trend strength. At the time of writing, the 14-day ADX for Tianyun International Holdings Ltd (6836.HK) is noted at 21.03. Many technical analysts believe that an ADX value over 25 would suggest a strong trend. A reading under 20 would indicate no trend, and a reading from 20-25 would suggest that there is no clear trend signal.

Investors are paying close attention to shares of Tianyun International Holdings Ltd (6836.HK). A popular tool among technical stock analysts is the moving average. Moving averages are considered to be lagging indicators that simply take the average price of a stock over a specific period of time. Moving averages can be very useful for identifying peaks and troughs. They may also be used to help the trader figure out proper support and resistance levels for the stock. Currently, the 200-day MA is sitting at 1.25, and the 50-day is 1.34.

For any technician, the trend is a major aspect of stock trading. The trend is the dominant movement in direction of a stock's price. When discussing the trend in terms of stock price, the assumption is that the trend is expected to continue over a certain period of time. Obviously there is no guarantee that a defined trend will continue, but technical analysts will scour the charts looking for signs of a developed trend to help make the best possible decisions. Seasoned chart watchers are typically able to spot if a trend is up, down, or sideways. Learning how to trade the trend is another part of the process that traders may spend years perfecting.
